Teaching Social and Emotional Learning- Wednesday, May 25, 2016

Social emotional learning (SEL) by definition is a process for learning life skills, including how to deal with oneself, others and relationships, and work in an effective manner. Although there are many great SEL programs, SEL can also be incorporated into each lesson as a way of teaching for students to really understand how to action the skills in a variety of situations and form positive habits. The key is to not look at this as a new, stand-alone program but to incorporate this into what you are already doing. This will enhance your teaching by building better relationships. We will be teaching strategies that you can take and use in your classroom.

Teaching Social and Emotional Learning- Thursday, May 26, 2016

Continuation of the previous workshop- "Teaching Social and Emotional Learning"

Brain Based Instruction- Monday, June 1st, 2016

Brain based learning is a comprehensive approach to instruction using current research from neuroscience. Brain-based education emphasizes how the brain learns naturally and is based on what we currently know about the actual structure and function of the human brain at varying developmental stages. Currently, related techniques stress allowing teachers to connect learning to students' real lives and emotional experiences, as well as their personal histories and experiences. This form of learning also encompasses such newer educational concepts like: mastery learning, experiential learning, learning styles, and cooperative learning.

Brain - Based Instruction - Tuesday, June 2nd, 2016

Continuation of the previous workshop - "Brain-Based Instruction."
